Tool Description

Quire is a project management software that uses a Kanban style board combined with to-do lists. It brings a simple branching, a fundamental pattern we see everywhere in nature, to project management because it is how our minds work. An idea spawns more ideas. When faced with a challenge, we tackle it by breaking it down to more manageable ones. The Quire tree-like structure naturally captures how we process our thoughts visually. It is a really useful tool to use from the start of your Digital Social Impact course design and carry through to delivery and reflection.
